

DOWNLOADING DBEAVER

PLEASE DO THIS BEFORE WORKSHOP

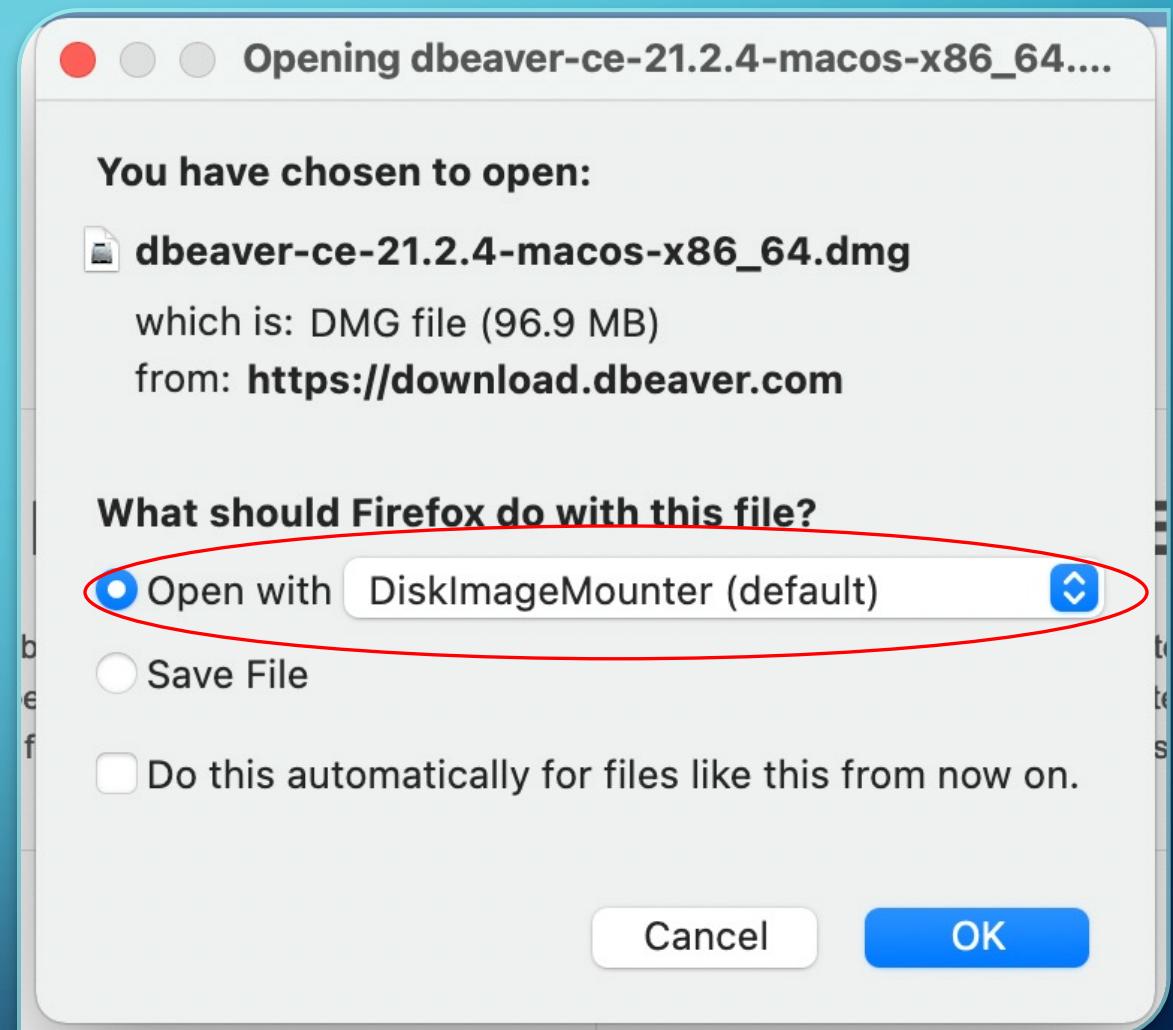

STEPS TO DOWNLOAD

- Website:
<https://dbeaver.io/download/>
- Navigate to downloads
- Click on: Mac OS X x86 (dmg)

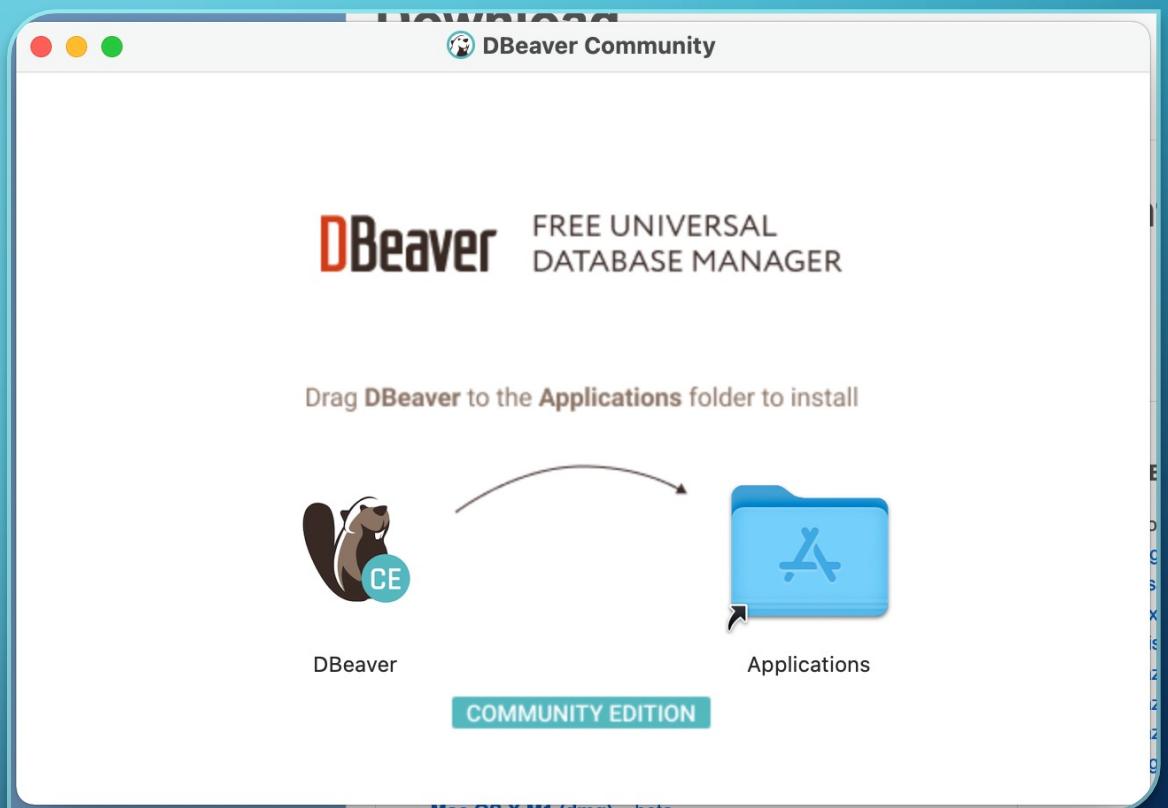

STEPS TO DOWNLOAD (CONT.)

- Click on open with
- Click OK

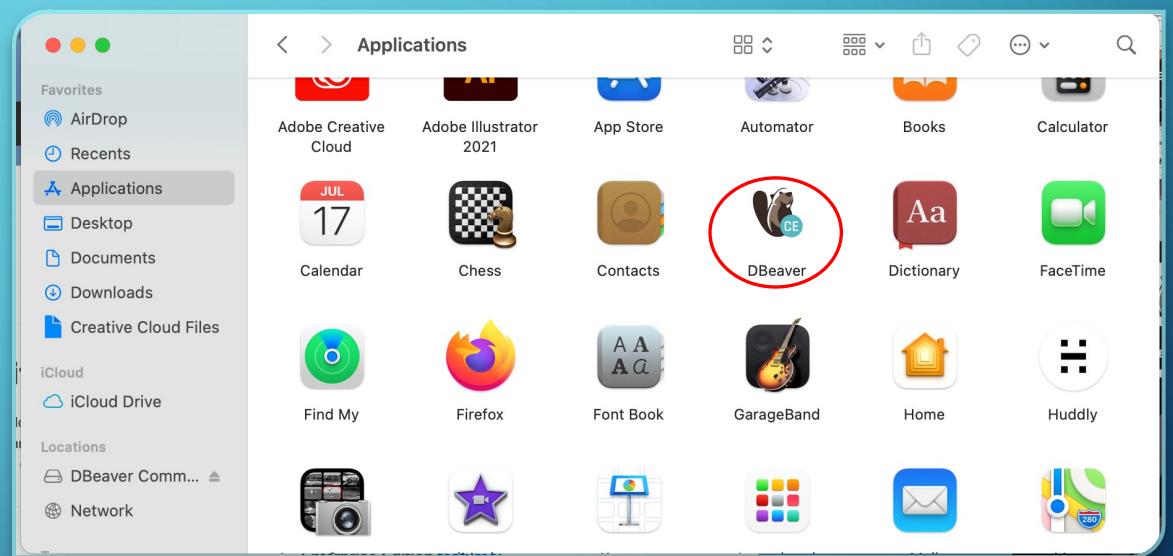

STEPS TO DOWNLOAD (CONT.)

- Slide program over to applications

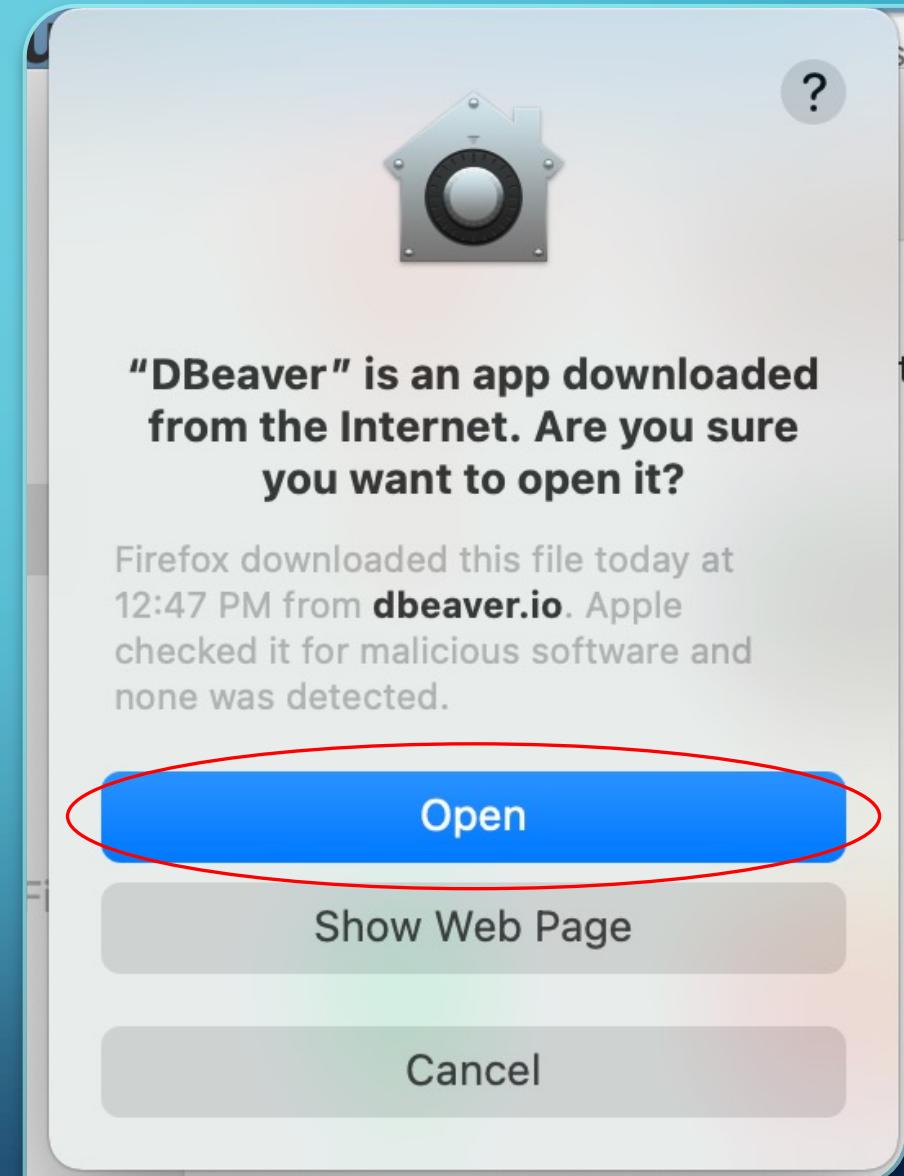

STEPS TO DOWNLOAD (CONT.)

- You should find it in your applications,
under the letter D.

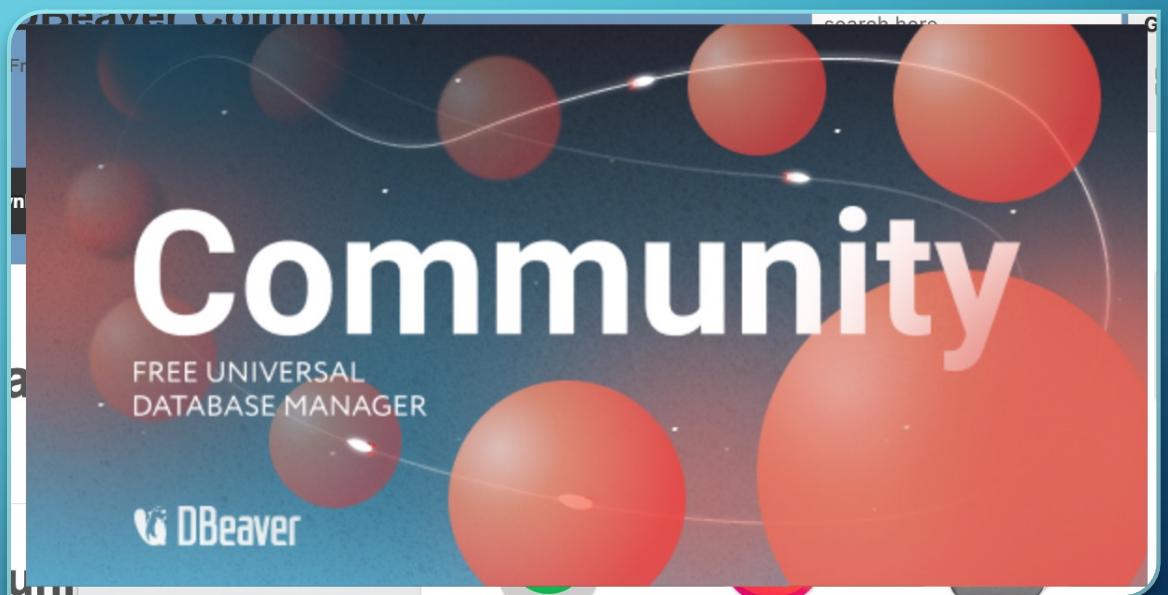

STEPS TO DOWNLOAD (CONT.)

- First time opening it will ask this question, click open.

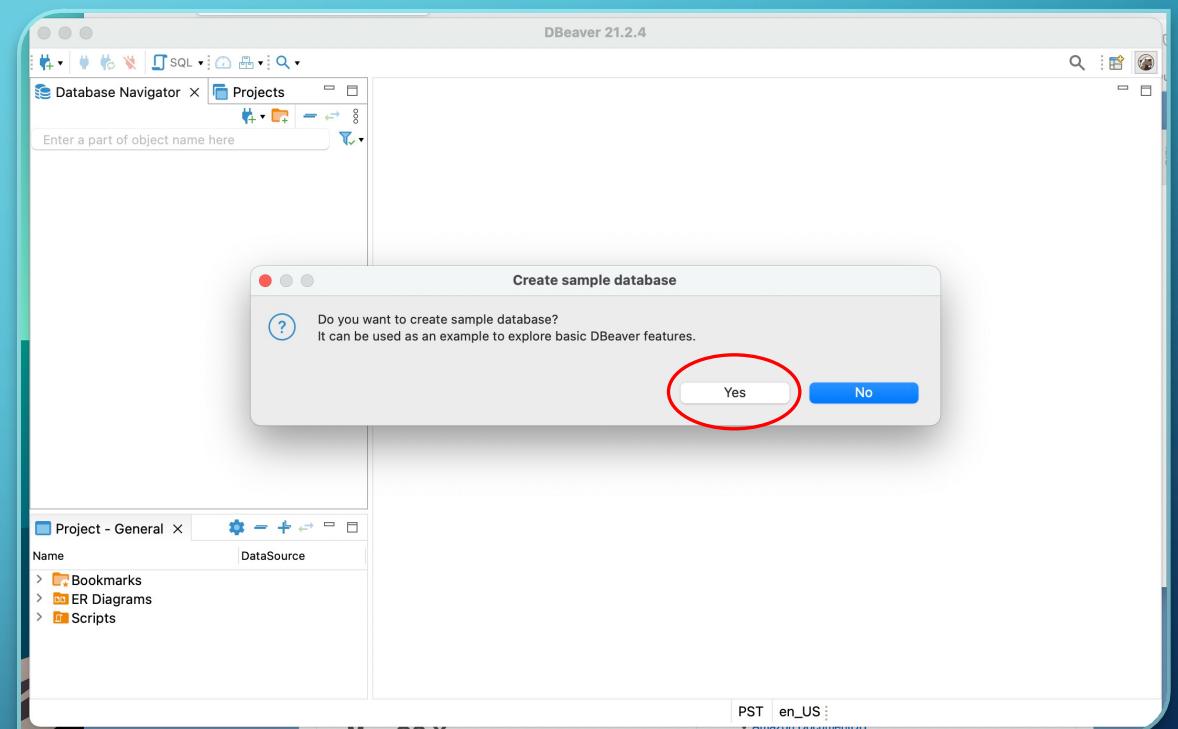

STEPS TO DOWNLOAD (CONT.)

- This is what it should look like when you're opening the application.

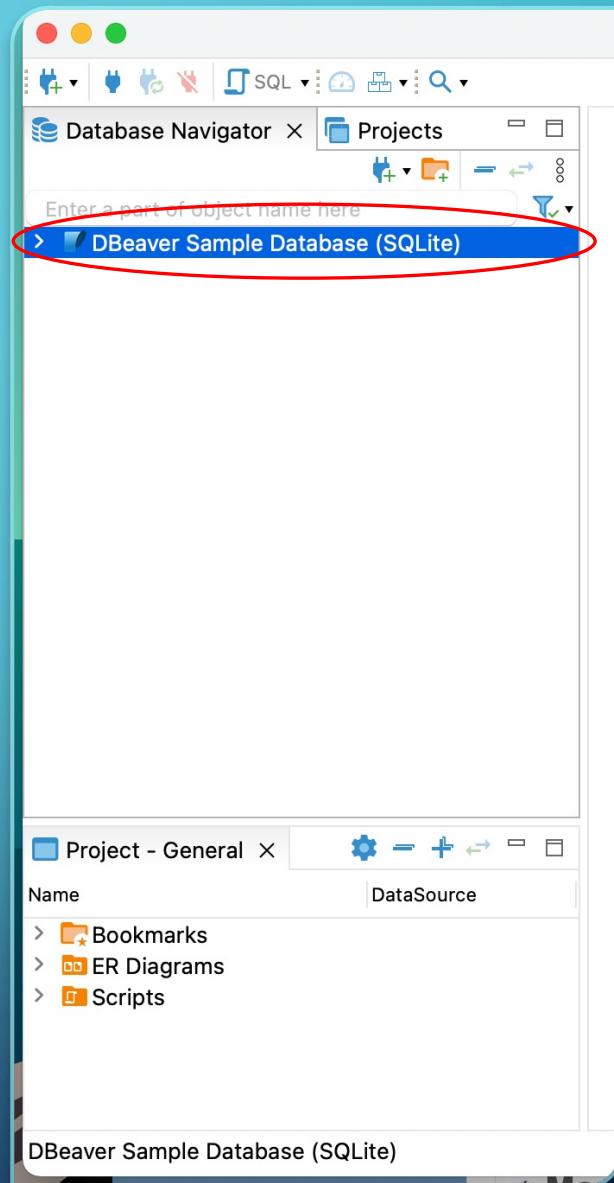

STEPS TO DOWNLOAD (CONT.)

- First time opening it will ask if you would like to create a simple database, click yes. This is what we will be working with throughout the workshop.
The SQL language will be SQL Lite.
- NOTE: If you clicked no on accident, go to slide 16

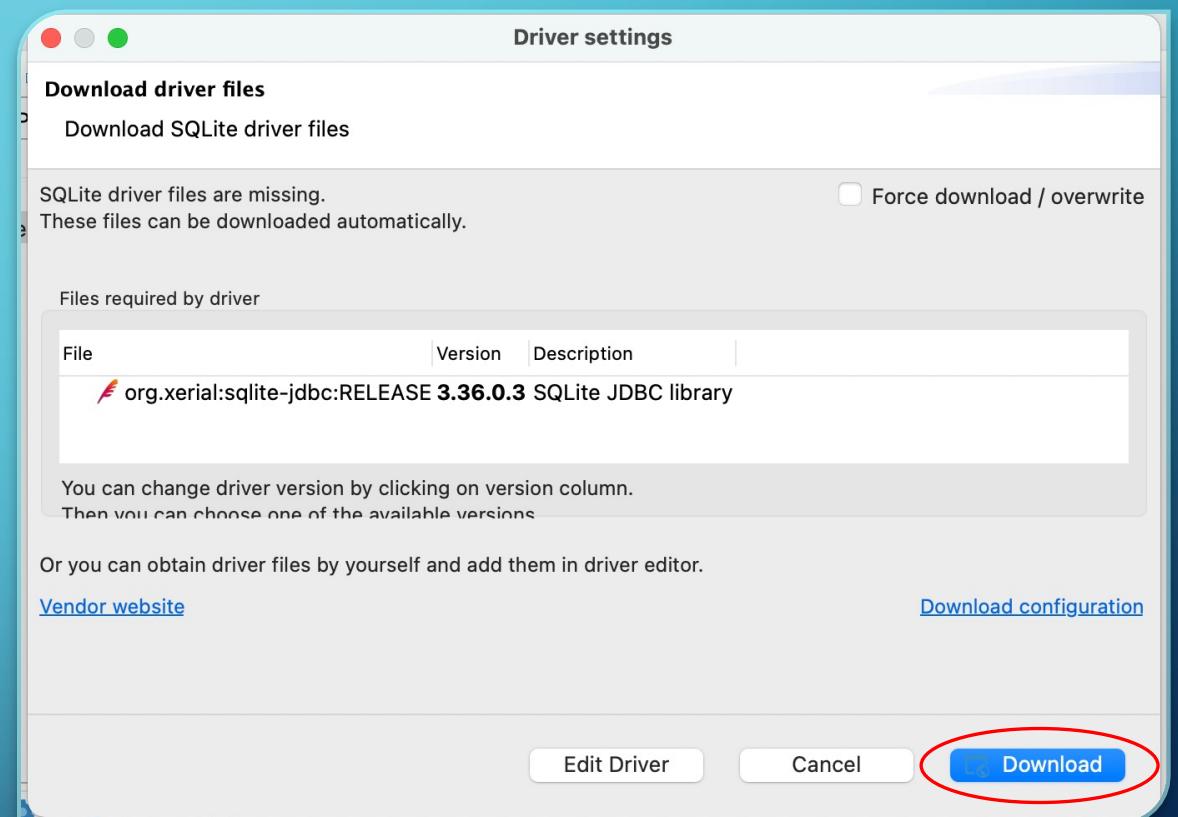

STEPS TO DOWNLOAD (CONT.)

- This is what it should look like on your left-hand side of your program.

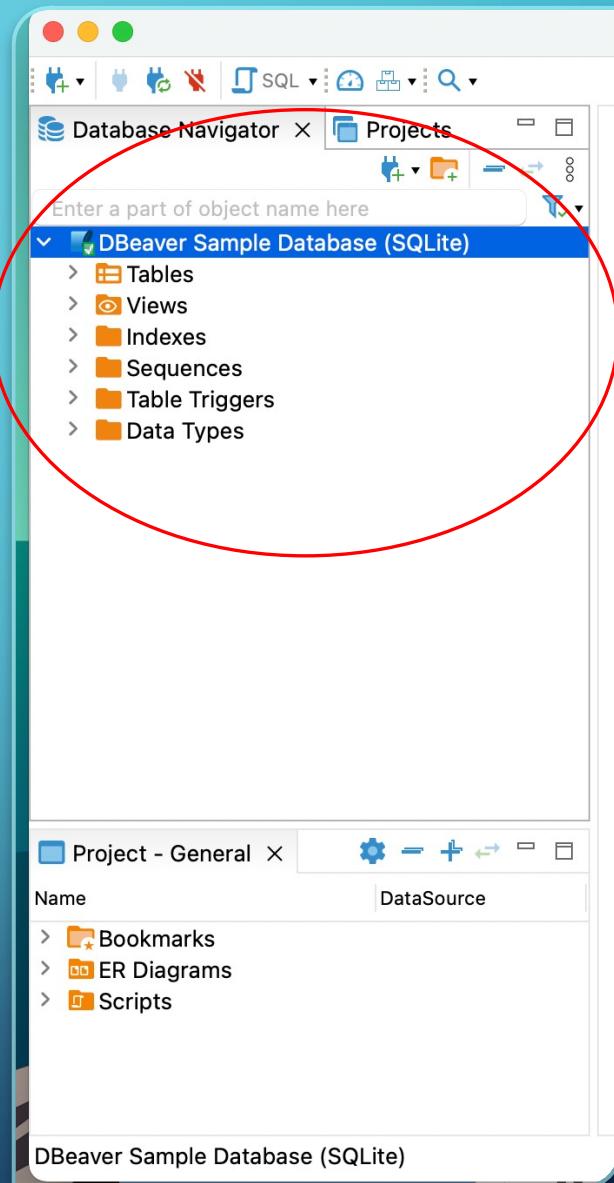

STEPS TO DOWNLOAD (CONT.)

- When you first click on the database, this window will pop out click download.

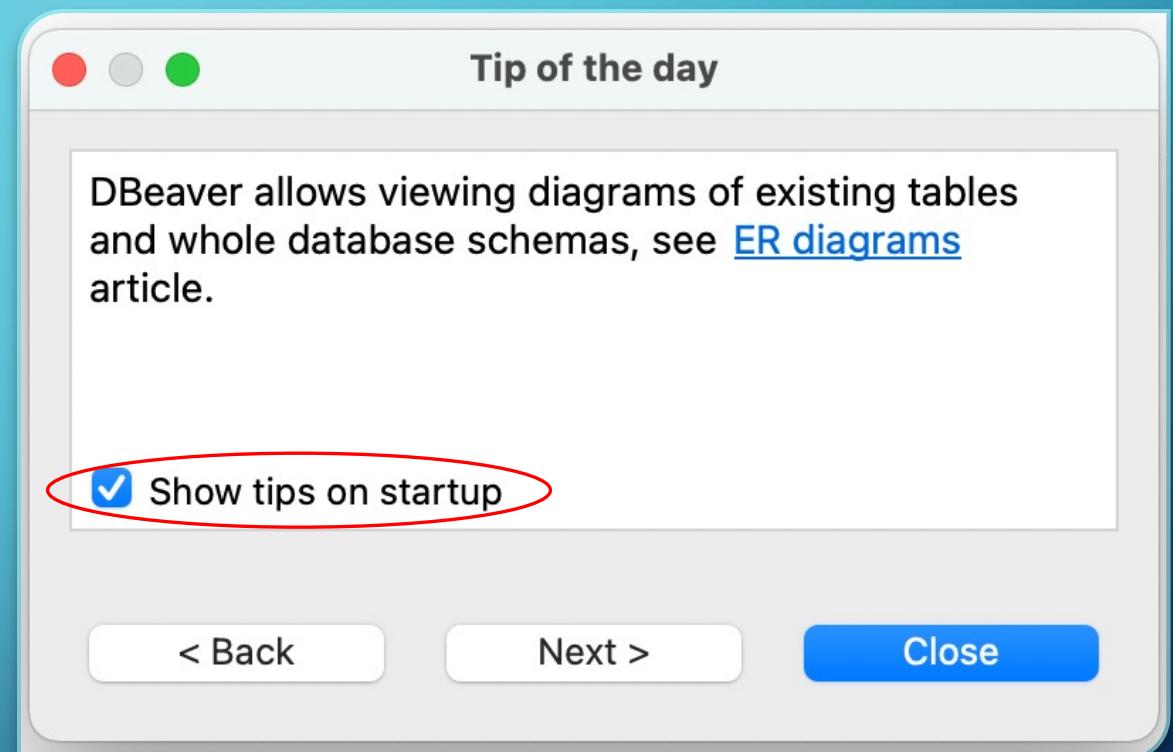

STEPS TO DOWNLOAD (CONT.)

- Once it has finished downloading all of the drivers your left-hand side of the program should look like this.

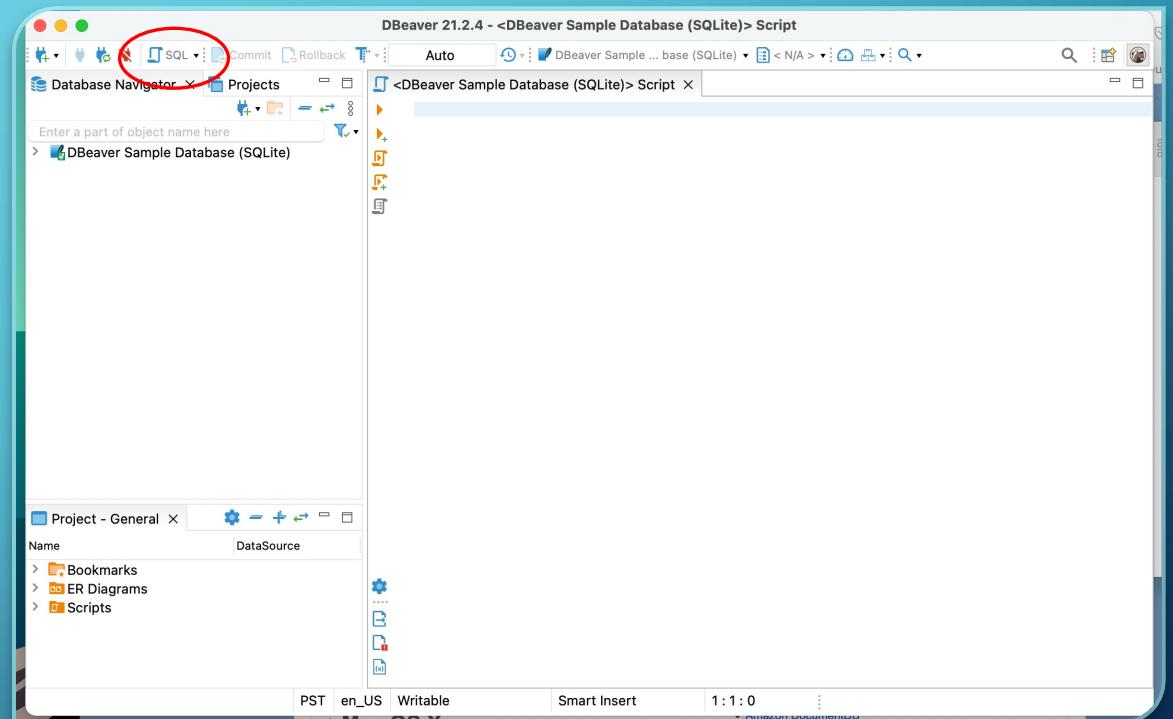

STEPS TO DOWNLOAD (CONT.)

- When you open the program again usually this pops up, it's just the tip of the day you can disable it by unclicking show tips on startup.

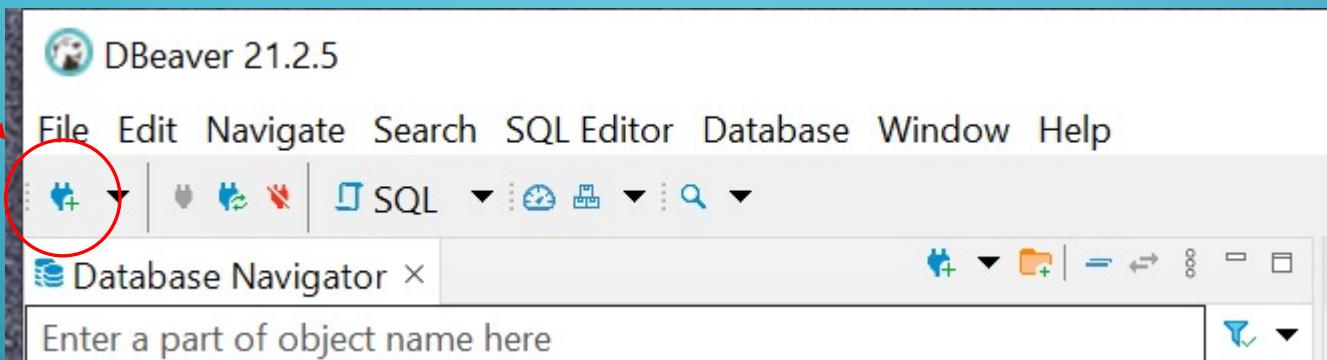

STEPS TO DOWNLOAD (CONT.)

- Click at the top where it says SQL and it has a small little design of a fancy paper looking icon, it should open a script editor. This is what your full interface should look like before starting the workshop.

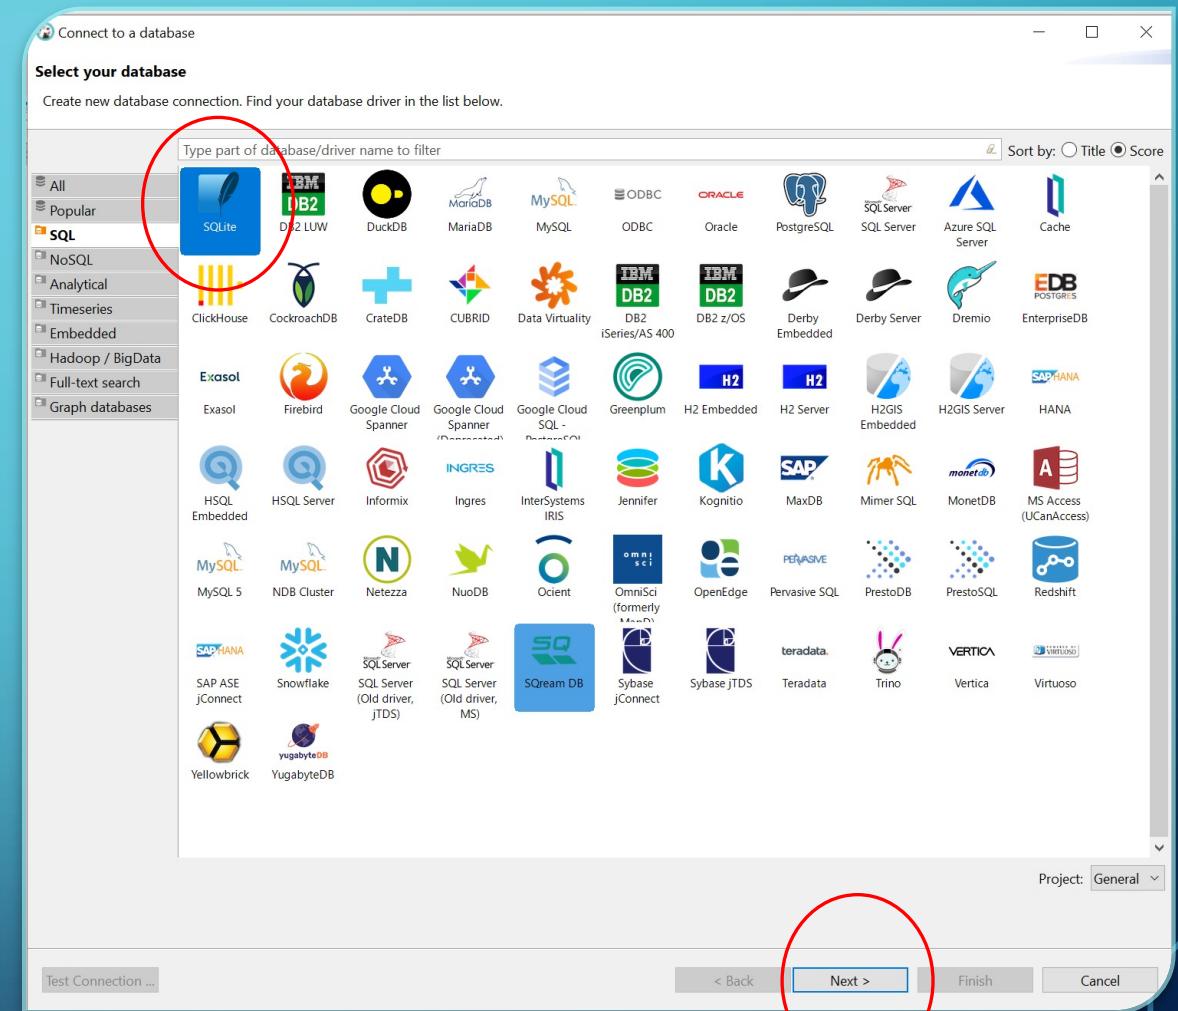

LET'S SAY YOU CLICKED NO

Click here

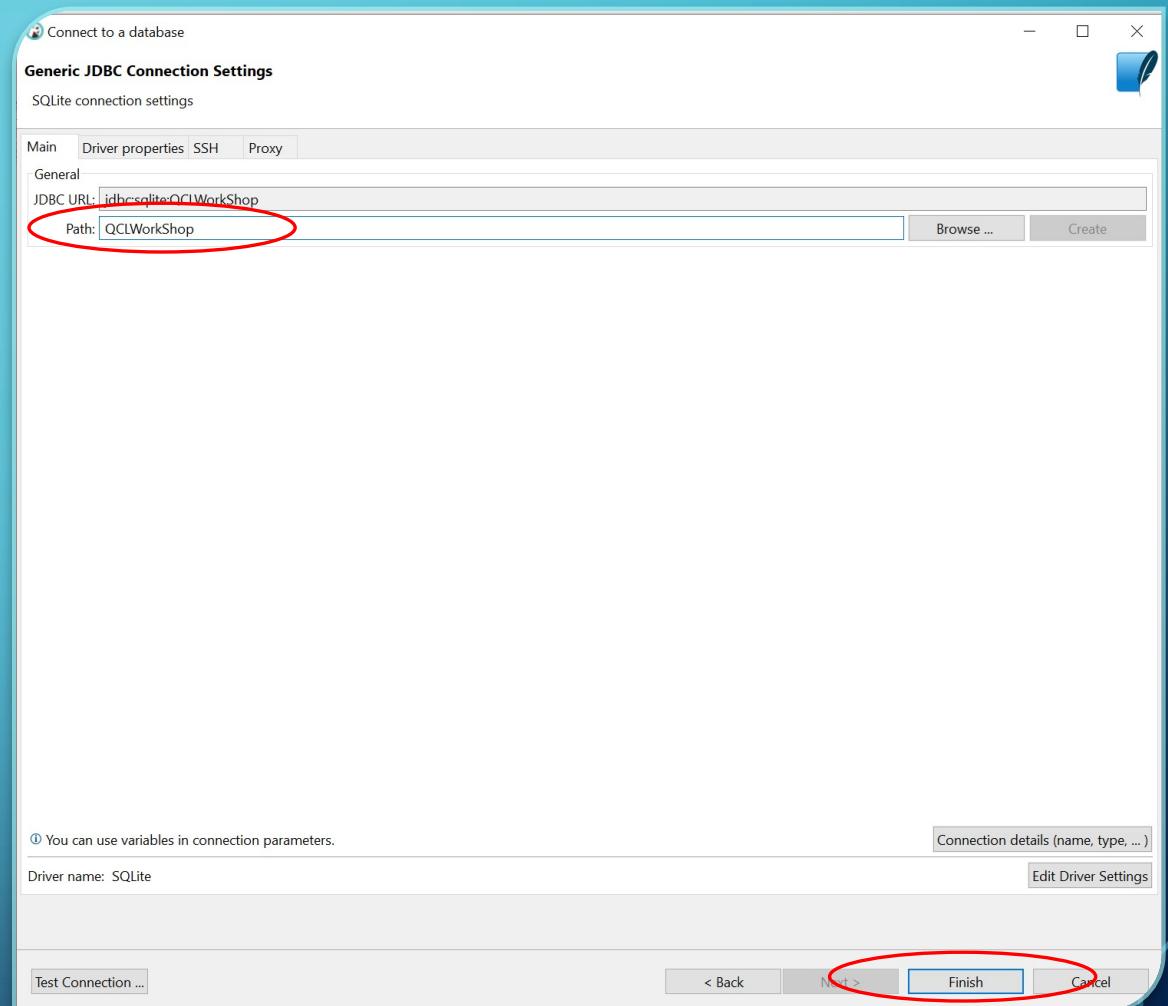

PICK DATABASES

- Click on SQLite and click next

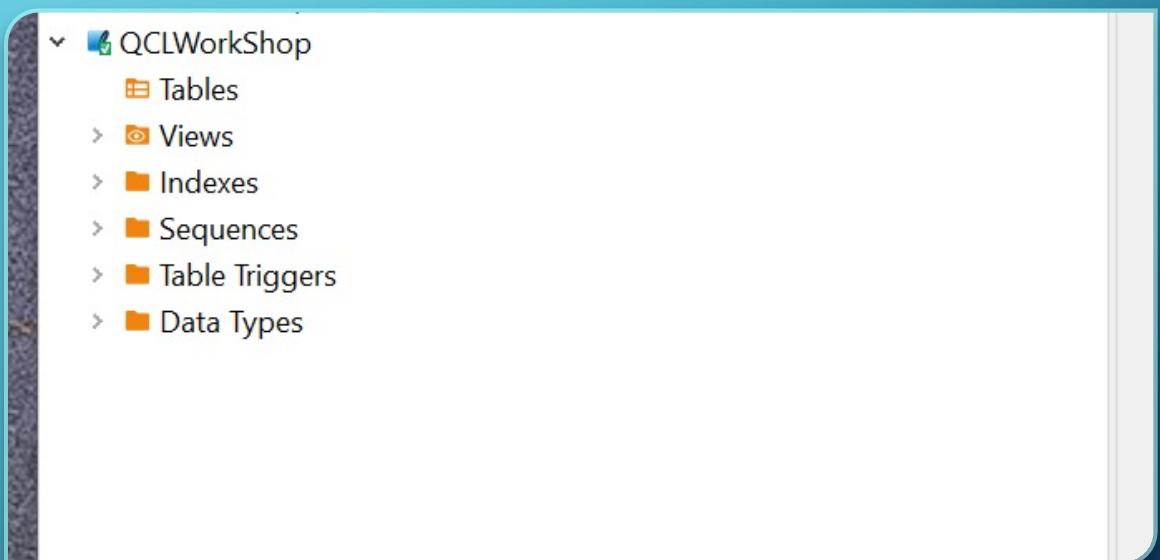

PATH

- Type in Path: QCLWorkShop (you can name is whatever you like, this is just a suggestion for the workshop)
